

Kewill.Integrate™

Adapting technology to meet your unique business needs

Kewill.Integrate™

- Integrate with WMS and other apps
- Gain company-wide access to shipment status and tracking info
- Exchange EDI order and invoice data with back office systems
- Improve customer service
- Improve quality control
- Reduce operating costs
- Eliminate errors and rekeying
- Improve fill accuracy

“Kewill.Integrate cut the installation time virtually in half while the data exchange between our Parts Order Entry System and Clippership has actually doubled in speed.”

— Scott Doorn, Operations Manager, Ellison Machinery and Robotics

Benefits

- Improve customer service by enabling easy access to shipment status and tracking information.
- Improve quality control and reduce operating costs and errors by eliminating duplicate data entry.
- Improve fill accuracy through the integration of pack verification data.
- Automate in high-throughput environments with WMS and integrated material handling equipment applications.
- Exchange EDI order and invoice information with back office systems.

Features

- Unique in that it provides integration services that aren't embedded or attached to an existing application.
- Modern 32-bit tool.
- Utilizes proven Visual Basic for Applications (VBA) modern programming language
- Programming logic enables the implementation of customers' business rules.
- Application-specific integration support in the form of terminal emulation Kewill Connectivity Modules (KCMs.)
- Supports ODBC, TCP/IP, ASCII file and Port KCMs
- KDMs to support Access, Paradox and DBF.

Adapting technology to meet your unique business needs

Kewill.Integrate™ is the next generation of TracerX®, well known for its integration capabilities, with more features designed to speed integration projects along. It enables a company's business logic to be incorporated with the integration of Kewill shipping applications and existing WMS, ERP and CRM systems. It also works with other Kewill applications to transfer EDI ordering and invoicing information to and from back office systems.

Gather. Transform. Exchange.

Need to add new features or capture information from other applications? **Kewill.Integrate™** executes user-specific procedures in the background, reacting to events while gathering, transforming, and exchanging data among multiple applications and devices.

Simple, High-level Development Tool

Kewill.Integrate™ delivers totally integrated solutions, without the costs and support problems associated with customized applications. **Kewill.Integrate™** provides a Windows-based development environment with simple, high-level tools for quickly enhancing applications.

Quickly Adapts to Changing Technologies.

Whether you need to exchange data with a DOS or Windows application, SQL server, scale, scanner, or other device, **Kewill.Integrate™** can achieve integration in a few simple steps. You can easily change procedures as your needs or technology changes.

Development Tools

- Runs in Windows 95, NT and 2000
- Windows user-interface controls
- Full access to VBA constructs
- Database manager

Integration Tools

- ODBC, DDE and DLL Support
- Serial and parallel port access
- Clipboard and keyboard macro control
- ASCII and INI file handling

Application Interfaces

- Terminal emulation
- Generic Windows applications
- Email Clients
- Shipping, mailing, and receiving
